MY STORY

I didn't start with design, I started with understanding how things work. With a background in Physical science, I developed a natural way of thinking in **systems, structure, and cause-effect relationships**. That mindset eventually led me into product design, where I now focus on solving complex problems and turning them into simple, intuitive experiences.

Today, I design products across **SaaS, AI, and real-world service platforms**, helping businesses move from confusion to clarity and users from frustration to flow.

WHAT I DO

I design products that:

- Simplify complex workflows
- Improve how people interact with systems
- Drive real, measurable outcomes

From idea to execution, I work across:

Research → Strategy → UI → Prototyping → Developer Handoff

EXPERIENCE

Tech4mation Limited — Product Designer | UX Engineer | 2025 – Present

When I joined Tech4mation, I noticed a recurring pattern: Systems were powerful but difficult to use. So I focused on simplifying them. I redesigned key SaaS dashboards and internal tools, turning scattered and complex workflows into structured, intuitive flows.

- Improved task completion by **~30%** by reducing friction in user journeys
- Built a reusable design system that reduced inconsistencies by **~35%**
- Worked closely with engineers to ensure design translated cleanly into production
- Reduced UI implementation issues by **~25%**

What changed:

Users stopped struggling to figure things out and started completing tasks faster.

Landscape — Product Design Lead (Contract)**2025 – Present**

At Landscape, the challenge was just design, the previous user interface lacks clarity and aesthetics. The product had potential, but users struggled to understand how to navigate and get value quickly.

I stepped in to restructure the experience.

- Redesigned onboarding flows, increasing activation by **~28%**
- Reduced drop-offs by **~22%** by simplifying key user journeys
- Created high-fidelity prototypes that helped teams align faster and make better decisions

What changed:

The product became easier to understand, faster to adopt, and more engaging to use.

Pubblescope — Founder & Product Designer**AI Real Estate Platform | 2025**

Pubblescope started with a real problem: Finding affordable housing in Nigeria is stressful, time-consuming, and inefficient. So I built a product to fix it.

- Designed an AI-powered platform that matches users with homes based on budget and location
- Improved search relevance by **~40%**
- Reduced time-to-find housing by **~35%**
- Designed the entire experience—from search to recommendations to dashboards

What changed:

Users spend less time searching and more time finding the right home with AI.

Vast Learn — Product Designer**2024 – 2025**

Learning platforms often overwhelm users. At Vast Learn, I focused on making learning feel simple and natural.

- I redesigned screens that increased engagement by **~25%** by improving content flow and UX structure
- Reduced navigation time by **~20%**

- Designed interfaces that made learning easier across devices

What changed:

Users spent less time figuring things out and more time learning.

Talent Mine Foundation — Head of Media (Volunteer)

Here, design was about impact not just products.

- Created visuals and storytelling content that increased engagement by ~**50%**
- Helped communicate real stories from underserved communities

What changed:

Design became a tool for visibility, connection, and real-world impact.

SELECTED WORK

CyberSquad — Repair Platform

A system where multiple roles must work together seamlessly. I designed the experience across Admin, Technician, QA, and Front Desk.

- Introduced SLA tracking and real-time workflows
 - Improved accountability by ~**40%**
 - Reduced delays by ~**25%**
-

NativeTalk / NativeID

Focused on communication and identity systems.

- Designed onboarding and CRM flows
- Introduced gamification to improve engagement

Result:

- +30% onboarding completion
 - +20% engagement
-

Opportuna — AI Job Platform

Job applications are repetitive and exhausting. I designed a system that automates the process.

- Reduced manual effort by ~**50%**
 - Improved efficiency using AI-driven flows
-

VeriAI — AI Election System

I explored how trust can be designed into systems.

- Designed secure, transparent voting experiences
 - Focused on clarity, trust, and usability .
-

TOOLS & SKILLS

Design: UI/ UX • SaaS • Design Systems • Interaction Design

Tools: Figma • Framer • Adobe Suite • After Effects

Technical: HTML • CSS • Tailwind • Git

Product Thinking: AI Design • Research • Growth • Accessibility

EDUCATION

B.Sc. Applied Physics

Lagos State University — 2023

Zuri Product Design School

Ojodu Lagos — 2022
